Education

Korea Advanced Institute of Science and Technology (KAIST) — Daejeon, Korea
M.S. in Culture Technology — *Mar. 2025 - Present*
Graduate School of Culture Technology; GPA: 3.93/4.3. Advisor: Prof. Junyong Noh.

Daegu Gyeongbuk Institute of Science and Technology (DGIST) — Daegu, Korea
B.S. in Convergence Engineering — *Mar. 2018 - Feb. 2025*
School of Undergraduate Studies, College of Transdisciplinary Studies; GPA: 3.5/4.3.

University of California, Berkeley — Berkeley, CA, USA
Exchange Student; Coursework in Statistics — *Jun. 2019 - Aug. 2019*

Research Interests

- Bidirectional knowledge transfer between 2D generative models and 3D graphics.
- Generative digital avatars: creation, stylization, editing, and facial identity.

Publications

- **StyleID: A Perception-Aware Dataset and Metric for Stylization-Agnostic Facial Identity Recognition**
  Kwan Yun, **Changmin Lee**, Ayeong Jeong, Youngseo Kim, Seungmi Lee, and Junyong Noh.
  ACM Transactions on Graphics (SIGGRAPH 2026).

Experience

Visual Media Lab, KAIST — Daejeon, Korea
Research Assistant; Advisor: Prof. Junyong Noh — *Apr. 2025 - Present*
Research on generative digital avatars, head avatar stylization, and facial identity.

Visual Media Lab, KAIST — Daejeon, Korea
Research Intern; Advisor: Prof. Junyong Noh — *Jun. 2024 - Aug. 2024*
Researched full-body avatar texture creation.

Klapoo
Co-Founder and CEO — *Dec. 2021 - May 2024*
Operated Daengbuhae, a multi-platform pet cosmetics curation service with 8,000+ products and 14,000+ ingredients, supporting ingredient-based safety assessments using veterinary standards.

Projects

IITP SW StarLab

Generating Hyper-Realistic to Extremely-stylized Face Avatar with Varied Speech Speed and Context-based Emotional Expression

Deputy Project Manager — Oct. 2026 - Present
Project Manager — Scheduled from 2027

Research Contributions

1. **Photorealistic 3D Human Facial Model Generation from a Single Image**
   - Mapped a single facial image into a standardized latent space to generate an initial 3D human face.
   - Enhanced fine-grained facial details by estimating pixel-wise 3D spatial positions from the mapped representation.
2. **Animatable Gaussian Splatting-based Photorealistic 3D Human Face Reconstruction from Video**
   - Designed a Gaussian Splatting initialization method by fitting and refining a template mesh on captured facial video.

- Separated facial and background regions, extracted key facial features, and reconstructed photorealistic 3D faces using Gaussian Splatting.

Additional Information

Military service: Auxiliary Police Jun. 2020 - Dec. 2021

Completed mandatory service; discharged as Sergeant.

Security Unit, Daegu Metropolitan Police Agency; Crime Prevention Patrol Unit, Daegu Suseong Police Station.
